

Ariel Samin

Senior Software Engineer Email: ariel.samin@gmail.com | **Phone:** 054-7535758 | **LinkedIn:** [Ariel Samin](#) | **Location:** Israel

Professional Summary

Results-driven Senior Software Engineer with over 10 years of expertise in developing scalable, distributed, and high-performance server-side systems using C# (.NET). Proven track record of working with large-scale data ingestion pipelines, managing complex multi-threaded environments, and driving architectural enhancements. Adept at translating complex business requirements into robust, high-availability technical solutions for enterprise-grade software.

Technical Skills

- **Languages & Frameworks:** C#, .NET 5/6, .NET Framework 4.x-4.8, SQL, Web API
- **Data & Messaging:** MS SQL Server, RabbitMQ, Azure Blob & Table Storage, REST APIs
- **Cloud & Infrastructure:** Azure DevOps (TFS), Azure Portal, ADX/Kusto
- **Methodologies & Tools:** TDD, SOLID principles, IOC, Agile/Scrum, Git, Visual Studio, CI/CD Pipeline Development

Professional Experience

Nov 2024 – Present | Career Break

- Took a planned sabbatical to independently study financial markets, algorithmic trading systems, and data patterns, while spending dedicated time with family.
- Actively seeking a return to full-time, professional backend software development roles.

May 2019 – Nov 2024 | Varonis

Senior C# Backend Developer

- Transformed on-prem monolithic products into cloud-native SaaS, decomposing services into a microservice architecture and migrating embedded DB logic to C# application-layer code.
- Led the low-level design (LLD) and delivery of distributed, multi-threaded, and event-driven backend solutions utilizing C# (.NET), RabbitMQ, and Azure Blob Storage.
- Optimized high-scale data pipelines capable of processing up to 100TB per transaction with constant memory usage and predictable throughput, ensuring maximum system reliability and uptime.
- Developed robust server-side features for enterprise-level Windows permissions administration and automation products.

- Conceived and developed an automated GUI testing tool during a company hackathon; successfully productized it internally to streamline manual testing and significantly reduce boilerplate errors.
- Maintained and modernized legacy front-end WCF applications to guarantee backward compatibility and system stability.

Oct 2013 – Apr 2019 | NICE Systems

C# Backend Developer

- Developed core server-side features for the high-scale NICE Recording Platform.
- Engineered high-availability, real-time event systems using Web API, WCF, and WebSockets, resulting in improved system stability and enhanced customer satisfaction.
- Successfully integrated external storage systems via REST APIs/SDKs and complex CTI/SIP telecom systems, broadening platform capabilities to meet diverse enterprise client requirements.
- Authored comprehensive technical API documentation, collaborating closely with technical writers to ensure clear usability for third-party integration partners.
- Provided critical tier-3 dev-support during the initial years, directly handling, diagnosing, and resolving complex technical bugs and production tickets from the field.

Education

- **BSc in Computer Science** | Ben-Gurion University (Graduated 2013)
 - *Graduate Project:* Built and deployed an anomaly detection system in databases utilizing Hidden Markov Models.
